# Applications

**Enterprise Resource Planning (ERP)**

is a platform companies use to manage and integrate the essential parts of their businesses. Many ERP software applications are critical to companies because they help them implement resource planning by integrating all the processes needed to run their companies with a single system.

An ERP software system can also integrate planning, purchasing inventory, sales, marketing, finance, human resources, and more.

## Customer Relationship Management (CRM)

is a platform for managing all your company's relationships and interactions with customers and potential customers.

The goal is simple: Improve business relationships to grow your business. A CRM system helps companies stay connected to customers, streamline processes, and improve profitability.

## A learning Management System(LMS)

is a platform, web-based technology used to plan, implement and assess a specific learning process. It's used for e-learning practices and, in its most common form, consists of two elements: a server that performs the base functionality and a user interface (UI) that is operated by instructors, students and administrators.

# Students Information System(SIS)

• Manage your students information, grades, transcripts, GPA & certificates .

•Manage schedule, attendance, penalties & rooms .

•Integrate with other software platforms like ERP, LMS, email marketing, and dashboards to streamline college operations.

•Self-service portal that Integrates with payment gateways and accounting software to offer more options to your students.

# Health Management Information Systems (HMIS)

are one of the six building blocks essential for health system strengthening. HMIS is a data collection system specifically designed to support planning, management, and decision making in health facilities and organizations.

Health management information system (HMIS) is a system whereby health data are recorded, stored, retrieved and processed to improve decision-making.
